

## RuggedLine® Flat

Introducing the latest addition to our RuggedLine series - the RuggedLine Flat. Building upon our successful RuggedLine for top of cars, now developed for style side trays and canopies. This robust system is specifically designed around flat contact points to ensure durability and toughness.

- RuggedLine is laser-cut, built from tough, corrosion-resistant stainless steel. Each is then precision bent to ensure a perfect fit.
- Flexible configuration with LockNLoad Platforms or Trim HD cross bars
- Powder coated stainless steel pivot mount. No special Platform kits needed, and no wasted major components.

# RuggedLine Spine to Track Install

With the release of the RuggedLine Flat 1200mm spines part number 9812172 to fit Yakima tracks or most pre-installed tracks, this ready reference guide will assist in determining the correct platform or crossbar sizing when installed on a canopy, trade body, ute tub hard lid or roller cover using the existing track-to-track measurement or if required, what track size to order.

Ensure RuggedLine Flat is installed onto a flat surface.

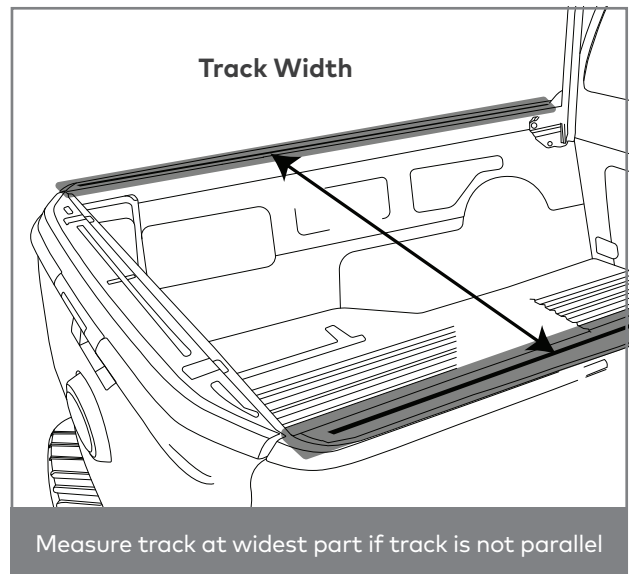

## A. Pre fitted tracks

Before installing your RuggedLine to an existing track check the following:

1. Is the track suitable to mount the RuggedLine to?
2. What size bars and/or platform will you need?

Not all tracks are positioned the same or have the same dimensions. The track cannot be on an angle and needs to be on a relatively flat surface. The track channel must also be the correct size to fit and hold the track nut, if the track nut does not fit or the channel is too wide then the RuggedLine should not be fitted.

Select your bars and/or platform. See the table below showing the measured track width (measured from the opening slot of one track to the next) and the recommended bar/platform sizes that should be purchased for your vehicle:

Track width	Platform Size	Platform SKU	Bar Size	Bar SKU
1000-1200mm	Platform A <small>(1240 width)</small>	9820337	1250mm	8000516
1200-1340mm	Platform B <small>(1380 width)</small>	9820338	1375mm	8000517
1340-1445mm	Platform S <small>(1485 width)</small>	9820378	1500mm	8000518
1445-1530mm	Platform G <small>(1570 width)</small>	9820343	1650mm	8000519
1530-1610mm	Platform I <small>(1650 width)</small>	9820345	1650mm	8000519

Once you know what bar and/or platform you need it's as simple as quoting the SKU number matching your track width and the 1200mm Track RuggedLine.

Order example for a 1100mm track width:

- 1 X RuggedLine Flat 1200mm 9812172
- 1 X LNL Platform A 9820337

## B. No track fitted

Because of the varied nature of the installs, we are unable to provide exact drilling instructions. It is up to the installer to determine the exact location of roof rack placements on the vehicle. Use the chart in the Pre Fitted track information to help with track placement.

Yakima tracks that are compatible with the RuggedLine Flat 1200mm are:

Part Number	Bar Size
8000360	LNL Universal Track Kit 800mm
8000361	LNL Universal Track Kit 1000mm
